ILAAP Risk Cube

Liquidity analytics and ILAAP submission support

An Excel-based tool for the Internal Liquidity Adequacy Assessment Process (ILAAP), connecting Survival Period Monitoring (SPM), funding data and bank-specific assumptions.

Three dimensions of liquidity adequacy

Time

Daily cash-flow paths identify the liquidity low point, first shortfall and survival horizon.

Scenario

Compare the Liquidity Coverage Ratio (LCR) benchmark, the bank's adopted stress and additional scenarios.

Response

Assess usable liquidity and monetisation, then evaluate management actions and residual needs separately.

From bank data to practical outputs

Data checks	SPM and funding-profile mapping, completeness and reconciliation.
Stress and survival	Cash-flow timing, daily liquidity and sensitivity to scenario assumptions.
Usable liquidity	Counterbalancing capacity (CBC), liquid assets, repos and other securities financing transactions.
Funding insights	Rollover, tenor migration, new funding and concentration through connected funding analytics.
Management outputs	Scenario comparisons, charts, residual needs and inputs for the ILAAP narrative.

Use as a working tool or an independent validator of liquidity calculations and assumptions, supporting internal audit reviews.

ILAAP submission support for tight timelines

BetterBankings helps banks prepare a coherent ILAAP package under demanding deadlines. We reuse available reports and policies, prioritise material gaps and progress data review, analysis and drafting in parallel.

An accelerated plan built around your submission date.

Milestones reflect data readiness and the availability of the bank team for review.

01

Mobilise quickly

Agree scope, data owners and milestones. Establish a focused request list and start from existing SPM, funding reports and supporting policies.

02

Strengthen the assessment

Check key inputs and results. Link the formally adopted stress scenario to the bank's risk appetite, target survival horizon and executable response.

03

Draft the submission

Prepare the ILAAP narrative, analytical exhibits and supporting working papers. Explain funding vulnerabilities, liquidity capacity, management actions and remaining gaps.

04

Complete management review

Support challenge sessions, resolve key comments and refresh reporting-date figures. Align the final package for the bank's approval and submission.

Typical outputs: configured analytics, an editable ILAAP report, supporting exhibits and a prioritised action plan.

Specialist expertise behind the solution

BetterBankings is a specialist boutique firm in financial risk management and regulatory technology, with a focus on prudential requirements for banks. Our products have been implemented in banks, combining transparent analytical tools with practical support and knowledge transfer.

Discuss your ILAAP timeline
